

```
import React, { useState } from 'react';

function NameInput() {
  const [name, setName] = useState("");

  const handleInputChange = (event) => {
    setName(event.target.value);
  };

  return (
    <div>
      <h1>Enter Your Name</h1>
      <input
        type="text"
        value={name}
        onChange={handleInputChange}
        placeholder="Type your name"
      />
      <p>Hello, {name ? name : 'Stranger'}!</p>
    </div>
  );
}

export default NameInput;
```
